Why quinoa?

- Ancient crop of the Andean region (Jacobsen et al., 2003)
- In 2013 its potential was recognized and was declared the "International Year of Quinoa"
- Nutritional grain, gluten-free and low glycaemic index (Vega-Gálvez et al. 2020)
- Quinoa is tolerant to a diverse range of abiotic stresses (Rao & Shahid, 2012) and adapted to marginal soils

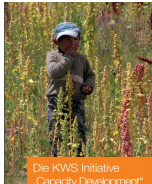

Global expansion of quinoa (Alandia et. al 2020)

Capacity development

- Contribute to food security of Peruvian smallholder farmers by local capacity development
- Genetic resources conservation and crop improvement for maize and quinoa
- Utilizing genetic diversity of Peruvian quinoa landraces for breeding improved varieties
- Project partners:
 - UHOH (Germany)
 - UNAP (Peru)
 - UNALM (Peru)
 - KWS (Germany)

KWS Saatgut-Projekte in Peru

Peru ist ein wichtiges Land für die Weltweitere Ausbreitung von Saatgut. Die KWS hat sich verpflichtet, die Produktion von Saatgut in Peru zu unterstützen und die Qualität zu verbessern. Die KWS hat sich verpflichtet, die Produktion von Saatgut in Peru zu unterstützen und die Qualität zu verbessern.

Ziel Ernährungs-sicherheit erhöhen

Die Initiative besteht aus einer Kombination von KWS-Initiativen.

Optimización en el mejoramiento de quinua

Overview

High-Throughput Phenotyping

Inkaverse Project

> New phenotyping methods for study the diversity and plant breeding application

- Phenotyping and characterization of genetic resources in quinoa
 - Using deep learning
- Use Mask R CNN for image segmentation and classification

> Software for Experimental Designs and Data Collection

- Improve experimental data quality and analysis
- Open source software in R programming environment
 - Interactive web applications
- Easy to implement in small breeding programs

Quinoa panicles: High-Throughput Phenotyping Rationale

Panicle shapes

- Extract traits information from panicle images
- Use information for breeding purpose and genetic resource conservation
 - GenBank Phenomics
- Estimate panicle indices related to the yield

Association of grain yield with panicle indices

Previous results

- Phenotyping of quinoa panicles is time-consuming
- PCA and calculated the heritability of six panicle traits indices from the selection and registration trials
- The index panicle $Width \times Length$

Lozano-Isla et al. (2023) Euphytica

Materials and Methods

Field trials and image selection

Season	Genotypes	Generation	Location	Exp. design	Photographic device	Resolution
2016-2017	1220	F8	Caracas, Puno	RCBD	Nikon D5101	5MP
2017-2018	003	F7	Itak Puno	Latin 10x10	ZTE Blade A610	5MP
2018-2019	25	F8	Caracas, Puno	Latin 5x5	Samsung SM-T295N	3.7MP
2019-2020	25	F8	Itak Puno	Latin 5x5	Samsung SM-T295N	3.7MP

- Image variability
 - Different resolutions
 - Different devices
- Unbalanced data for multi-location analysis
- Initial image annotation
 - Training set: 225
 - Validation set: 75

Field images

Results

Pipeline

Segmentation & Classification

Optimización en el mejoramiento de quinua UHQH-UNALM-KWS-UNAP Flavio Lozano-Ista 8

Results

Mask R-CNN vs Imagej

- High correlation between the phenotypic parameters
 - Panicle length, width and area
- Intermediate correlation between the RGB values
- Mask R-CNN allow to phenotype several images after model training

Inkaverse Project

Objectives

- Use open source software for data analysis and collection
 - CRAN packages
 - Interactive web applications
- Improve data quality and accelerate data analysis
- Tools to support design of experiments, data collection and analysis
 - Use in breeding programs

CRAN

The image shows two screenshots of CRAN package pages. The top one is for the 'inti' package, and the bottom one is for the 'huito' package. Both pages include a description of the package, an installation instruction, and a list of links and developers.

Optimización en el mejoramiento de quinua UHOH-UNALM-KWS-UNAP Flavio Lozano-Ista 10

Inkaverse Project

Rationale

- Use open source software for data analysis and collection
 - CRAN packages
- Improve data quality and accelerate data analysis
- Tools to support small breeding programs

CRAN

The image shows a screenshot of the CRAN package page for 'inti'. It includes the package description, installation instructions, and a list of links. Below the screenshot are four logos for Inkaverse packages: BRAVERSE, YUPANA, INTI, and TARPUPU.

Optimización en el mejoramiento de quinua UHOH-UNALM-KWS-UNAP Flavio Lozano-Ista 11

R packages

Implementation

- Project for experimental designs, data collection and analysis
 - *inti* R package
 - Yupana ⇒ Data analysis
 - Tarpupu ⇒ Fieldbook plan
 - MET ⇒ Genotype selection
 - BLUPs and BLUEs
 - Heritability
 - *huito* R package
 - Reproducible and flexible labels design

Preparación de etiquetas

Etiquetado

Colecta de datos

Optimización en el mejoramiento de quinua UHOH-UNALM-KWS-UNAP Flavio Lozano-Ista 12

Next steps

- ⇒ Publication
 - Inti package
 - Huito package
 - H2cal() for genotype selection
 - H2cal() vs ASReml
- ⇒ Implementation
 - Experimental designs
 - Split-plot
 - Latin square
 - Genetic designs
 - Alpha lattice
 - p-reps
 - Sudoku
 - Interactive labels design

Summary

- Importance of capacity development in latin america
- Use the high-throughput phenotyping for boost breeding and conservation of genetic resources in quinoa
 - GenBank phenomics
- Open source tools in R for support researchers for planning, collection and data analysis
